echidna.

interconnector

an API for API's!

echidna.interconnector Overview

echidna.interconnector is a powerful, flexible and highly customisable API that ties together business systems for businesses of any size.

The Interconnector seamlessly unlocks and interprets data from various systems into a common dataset that can be clearly understood and utilised to your business's advantage.

echidna.interconnector Benefits

Integrate

Seamlessly integrate with your current interface and branding.
Easily connect other data sources for fast, robust, and accurate reporting.

Customise

Match specific business needs across Cloud SaaS (single to multiple) or On-premises products.

Align

Align multiple Cloud/On-premises solutions
- Merge data sets and apply logic
- Apply Fuzzy logic to match and report
- System migrations (On-premises to Cloud, changing providers etc.)

Report Visually

Get answers FAST!
Advance your reporting processes so you spend less time manually compiling data.

Drive Innovation

Grow and transform your business by maximising the potential of cutting-edge technology.

Streamline Operations

Easily integrate data sources for fast, robust and accurate business planning. A perfect efficiency tool to:
- Save time
- Cut costs
- Improve ease-of-use

Contact an echidna representative to discuss further.
