

Cybersecurity Services

Cybersecurity is the practice of protecting systems, networks and programs from cyber threats.

As the threat of cyber-attacks continues to grow, the need for businesses to dedicate resources to Cybersecurity has increased.

Questions to ask yourself as a business

- 
- 🔒 What are we currently doing to protect against cyber threats?
 - 📌 What information/data is critical to our organisation and how well is it protected?
 - 🎓 What employee education and policies do we have in place to protect against cyber threats?
 - 📋 Have we ever undertaken a Cybersecurity audit of our environment?
 - 👁️ Is anyone auditing our computer logs looking for bad password attempts or excess file deletions?
 - 🔍 Have we considered Cybersecurity from a risk and auditing perspective?

How can Wireless Communications assist?

Wireless Communications' team of experienced and degree qualified Cybersecurity experts offer 3 Cybersecurity services:

- 1 Microsoft Office 365/ Email Hardening & Monitoring
- 2 ICT Environment Audit
- 3 Cybersecurity Assessment Services

Microsoft Office 365/ Email Hardening & Monitoring

Our experienced and certified Microsoft technicians audit all aspects of your Office 365 or alternative email environment to ensure security features are enabled and correctly configured.

We keep on top of all the latest known vulnerabilities and ensure correct countermeasures are deployed to help mitigate risk. This includes reviewing mail protection protocols to ensure your mail is authenticated and trusted.

Contact your ICT Consultant

ICT Environment Audit

ICT Environment audits are a general ICT audit that covers a broad range of areas. It provides a holistic view of general networking, patching of servers and Windows PCs that are running unsupported Windows software.

We also focus on more general security policies such as Firewall rules, Switches, Active Directory configuration, User accounts and permissions, Wi-Fi Security and Physical Security.

This is an excellent entry level audit, providing a comprehensive but easy to understand report, offering remedial advice for the vulnerabilities detected.

Cybersecurity Assessment Services

Through a comprehensive audit, Wireless Communications utilises our unique echidna.ciros technology, techniques and expertise to identify Cybersecurity risks.

We customise our approach to each business's situation, simulating the behaviours of an attacker by adapting our approach to identify vulnerabilities in your environment.

Once identified, risks can be addressed to ensure your organisation is exercising due diligence which aligns with legislative requirements and community expectations.
